

Traits of Contention

Character Identification and Comparative Thinking in Evolutionary, Developmental, and Behavioural Biology

May 26-27

Raadzaal, Institute of Philosophy

Abstract submission deadline:
February 28th 2023

Fracturing integrated dynamic systems like organisms into distinct traits is no neutral move. There are deep, unquestioned theoretical stances on what should count as a well-individualized trait. The workshop will put into focus the issue of character individuation and analyze practices of individuation across a variety of fields, with their distinct epistemic constraints and goals.
