The Grounding Problem

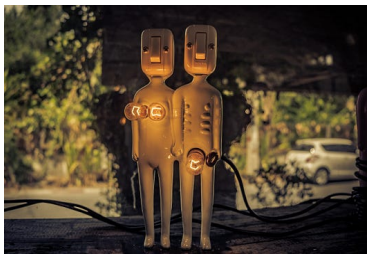

Photo by Michael Prewett on Unsplash

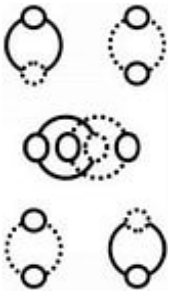
The ‘genesis’ of ‘information’ (conservation of an uber-simple circle) solves the ‘universal’ grounding problem.

Addressing all of the so-called ‘issues’ in post-humanism and post-structuralism (trans-humanism).

Integrating all disciplines (and sub-disciplines) (including but not limited to): philosophy, physics and psychology; biology and technology; economics, finance, and history.

Providing a roadmap for humans who must ‘sort out’ how to live (peacefully) (or ‘not’) (with) in a technological ‘reality’ (the ‘singularity’):



Conservation of the Circle is the core (and, thus, the only) dynamic in Nature.

The conservation of a ground state is the most important question in physics. It also surfaces in philosophy. And, also, in psychology. Figure-ground, any discipline, conserves a circle. Thus the unit is duplicitous, proving negation is half-the-time false. Meaning, we always return to the ground state. Reality is repetitive. Circular. (2014)
