

# PTK26: Call for Abstracts

We are delighted to announce the first call for abstracts for the **15th Biennial Meeting of the Polish Association for Cognitive Science (PTK26)**, hosted by the Institute of Philosophy, Maria Curie-Skłodowska University in Lublin, from **September 21 to 23, 2026**.

Confirmed plenary speakers: Kalevi **Kull** (Tartu University) \* Sara **Lenninger** (Kristianstad University) \* Marcin **Moskalewicz** (UMCS) \* Marek **Pokropski** (Warsaw University) \* Jordan **Zlatev** (Lund University)

## General goals of the Conference

The meetings of PTK provide an opportunity to present **research results of the Polish cognitive science community**. These meetings aim to increase awareness of the scope of cognitive studies in Poland and to foster integration among Polish researchers. It is also an opportunity to engage in dialogue with the international cognitive science community. Accordingly, we invite all the scholars working on issues of philosophy of mind, philosophy of cognitive science, cognitive linguistics, cognitive semiotics, AI-related research, cognitive psychology, cognitive neuroscience, cognitive anthropology, and other cognition-related fields to present their ideas and results.

## Special topic: Making sense of meaning-making

**In addition to** the above general goals, the Organizers aim to focus the attention of participants on specific topics and to initiate discussion on issues related to locally grounded research perspectives. As a result, inspired by the paper “Making Sense of Sense-Making” by Evan Thompson and Mog Stapleton, we particularly invite abstracts addressing the relationship between meaning-making and cognition. Accounts of meaning-making (semiosis) are focused on embodied subjects as embedded or even immersed in a physical and social environment, acting within these environments, experiencing them, engaging in intersubjective semiotic and linguistic interactions. Such a perspective shifts the emphasis from cognitivism to 4E (or even 5E) approaches. Accordingly, we especially encourage submissions that reflect upon the topic of multiple levels of meaning-making. Meaning-making can be considered a process rooted in biological life, which, in turn, is considered the foundation for emergent processes at the levels of subjectivity, intersubjectivity, sign use, and language. Such a framework raises questions about the boundaries between the layers mentioned above and about the possibility of crossing both the lower threshold of semiosis (life) and the upper threshold (language). Inquiries on varieties of meaning-making should be supplemented by methodological considerations; in particular, they should address the role (and balance) of first-person, second-person and third-person perspectives on cognition and meaning-making.

**Topics** for oral presentations include (but are not limited to):

- meaning-making and cognition
- consciousness and meaning-making
- phenomenological perspectives on meaning-making, lived experience, and cognition
- triangulation of first-, second-, and third-person methods in studies of meaning-making
- biosemiotics and meaning-making
- embodied meaning-making
- affect, emotions, and meaning-making
- making sense of the Other
- distributed and extended meaning-making systems
- meaning-making in social interactions
- the problem of artificial meaning-making
- meaning-making from an evolutionary perspective
- meaning-making as a developmental process
- comparative perspective on meaning-making and cognition
- meaning-making by means of gestures and language
- multisensory and polysemiotic meaning-making
- multimodal narrativity
- multicultural communication
- intersemiotic translation.

## Young Researchers Workshop

In an attempt to engage a new generation of cognitive scientists, we invite proposals for oral presentations as part of the Young Researchers Workshop, a special event to be held on **September 21st**. We therefore invite undergraduate and graduate students to submit abstracts that either address the special topic of the conference or present the results of their inquiries more broadly. We would also like to encourage academic teachers and supervisors to motivate and support their students in the process of preparing submissions. YRW abstracts will be reviewed separately. Specialists' comments on each accepted contribution makes the workshop a unique opportunity to receive expert feedback.

The conference will be held in **English** and **Polish**.

Deadline for individual abstract submissions: **April, 30th**

If you wish to organize a theme session (4-6 papers), please contact the Organizing Committee. Deadline for theme session proposals **April, 30th**

Young Researchers Workshop submission deadline: **May, 15th**

All submissions will be subject to peer review by the Scientific Committee.

Notification of acceptance: **June, 1st**

Details of the submission process are available on the conference website.
