$\Phi^{CEU}|BL\rangle$

$|BL\rangle$ (aka Barry Loewer) has long been known to be an eigenvector of the philosophy operator Φ^{CEU}. We have accordingly decided to measure its eigenvalue, in talk-units, on July 13, 2015, in Budapest. Speakers will contribute 1 talk-unit each, on a variety of subjects on which Barry has been working.

Hanoch Ben-Yami — The notion of place and some quantum puzzles • Mathias Frisch — TBA • Terry Horgan — Epistemic probability • Ferenc Huoranszki — The compatibility of determinism and chance • Alex Reutlinger — Scientific vs. metaphysical explanation • Howard Robinson — Why "realism-light" does not work for the special sciences • László E. Szabó — A new operationalist reinterpretation of QM • Charlotte Werndl — Reconceptualising equilibrium in Boltzmannian statistical mechanics • Barry Loewer — The Mentaculus
