Rise of China Discussion

The so called rise of China is a topic in all paper media, online media and academic lessons. This can be also reflected in the online MOOC lessons. The focus can be categorised.

A: Power Shifting of Economic and Military Hegemony USA → China
B: Philosophical discussion of Confucius and Chinese History
C: Technical discussion about Chinese Industry and Energy
D: Political and Strategic discussion about Tianxia and Silk Road (OBOR)

American Harvard University ChinaX Series

The ChinaX Series are very fundamental academic investigations and discussions about category A, the power shift China → USA.

The focus is eagerly set to analyse the past Chinese dynasty, from Shang to Zhou, in order to understand the systematic rise of China. To get a understanding of the Chinese Thought, there are many books and literature.

Roel Sterckx is a little bit of an exception, because he reflected also the Chinese art of cooking and carving [1].

I noticed 3 neglected points which are present in all American lectures.

1. What is less considered, by American researchers is the relation China had with its neighbours, before it was getting in contact with the first European and Greek counterparts. Often direct comparison are made between the Pre-Socratics and the Confucius, Lao Tze (Taoist) models are thinking and the influence of Indian thinking, such as the Bhuddism and the Vedas are not considered. In this role, the American an interpreter of the philosophy of mind, are referring at the greek heritage what Aristotele and other greek Indian traveler witnessed from the Indian Brahman thinking, but not noticing that they had no Chinese contact of this time. But India has common Himalayan borders and may acted.

2. Another topical American ignorance is the influence Chinese migrants had in the influence American history like English, Irish, Germans and Africans. Of course Chinese worker helped to connect the American railway line from East to West, which played a role in the rise of American welfare. Later on they build Chinese towns in all American cities, opened the Chinese restaurants and shops, but also penetrated in the university, but less interfered in politics. Less American might have got contact with Chinese Civilisation and Thoughts, but the Chinese had intensive contact with American life styles, economy and politics. American intelectuals had also interpreted Chinese and eastern philosophies such as Taoism and Zen Buddhism rather more as reflecting the Maoism. The Taoist philosophy was getting popular during the 1960 because of its Wu wei (Doing nothing) and Yang/Ying Qi Energy [1].

3. Americans are talking less about Chinese infrastructure projects, but American newspapers are thematising the Tianxia idea to lift the Westphalian Treaty politics. China has built many projects in South Asia, Central Asia, Africa and Europe and taken the initiative to build new harbours, roads, rails and pipelines.

Maybe this is because the EU and US did not make bigger worldwide projects since the 1990.

---

[1] Refer to Mantak Chia Books and drawings [9]

Notes on Chinese Modernisation
It is more discussed that China improved soft power with presence in international organisations, such as Worldbank, UNO, WHO which had been US dominated before.

Chinese Hongkong Polytechnic and TsinghuaX University

The original Chinese lectures from Hongkong and TsinghuaX Universities (19) had finally more helpful for me to understand the development in China. China's still is a communistic state, ruled by the CPC with 80 million members. Maoism may not be based on Russian Leninism and German Marxism, but it has a common ideological, which is never much reflected by HavardX.
Chinese, Indian, Greek, and European time line interferences

The Chinese ancient time line has a long time line, starting at 1600 BC in the Shang Dynasties and is just as old as the Indian Vedas. If you consider Indian, Greek, China, and Europe timelines, then you see that civilization time lines did not develop in the same time. Much of the knowledge may be still hidden, because the European civilization with its swabian bone venus 35000 BC and the Stonehedge 3000 BC culture is still unknown and unexplained for us.

The Indian Myth and Vedas are about 5000 BC and the first notice of Chinese culture came with the bone inscription with Chinese signs. Cultural and philosophic evidence comes first with written signs on stone, bone, or other durable media. The Indian Vedas are one of the oldest description trying to make thoughts.

The Chinese and Greek philosophy may have developed at the same time line 500 BC. The may have noticed from each other, but the time between notice and interest is always delayed. Buddhism has entered China much earlier and prepared the base for passive guidelines. During this time, the Indian Charvaka developed a critical mind materialist philosophy similar to the later Greek atomist.

The Greek got knowledge from the Indian Brahmaism during Alexander's battles in India or from earlier traders. About 900 AC the European witness Greek philosophy transmitted by the Arabic invaders in Spain. About 1600 AC the first Portuguese sailed to China and about 1815 the first Confucius translation caused interest in Europe.

Chinese philosophy in Europe and America came popular 1960 with the Taoist books explaining the Qi, in the Ying / Yang.

Interference time line

It is important that contact, notice, Interference and interest of culture and philosophy are not synchronized. The interest on Taoism was much delayed on related to a 1960 American time spirit.
The modern Chinese Time Line

The modern chinese time line started when the chinese dynasty began to colapse. The new area of asia was introduced by foreigner, with the interference of russian and indian Comintern traveller to China 1911. Prof. Wang Hui from TsinghuaX explained that Chinas Commuist followed the Sovjet Modell first and then after 1949 slowly emancipated from the sovjet Leninist model based on worker liberation. This sovjet model was not appliable in China, because they had not proletariat masses.

Mao and the CPC had to work with peasant masses. Prof Wang Hui explained 3 time periodes toward the modern China which each long time of about 30 years.
He said that the Chinese revolution was from 1949 until the system sovjet crisis in 1989. In between there had been two phases, one extreme with the experiments of cultural revolution and the cold war, where China had less possibilities to develope but was looking for independence. He emphasized that the cultural revolution, with its methode to send the intelectuals to the countryside had been most decisive for the fast development of the chinese economic working power, because the peasent had been educated on the fields and than could get very productive in the 1990 when they came as migrant workers into the industry and cities. Other countries like indonesia and also India with its still remaining 5 class cast system could not do similar, because their lowest classes (even when cheaper) did not had similar education in reading, writing, mathematics and skills. The typical american and european analyst are only focused on cheap later. But then India with the low Dalit class should be more successful.

The german influence in the catastopic 1989

The 1989 the fall of Berlin wall is still considered of turning point of sovjet empire loss and the catastophic cause of the collapse of the comunistic idealism. 1989 is observed in the west as the superior power of the american hegomony and advantagve of freedom and free trade. It is noted as a lucky year for re-unification and the real end of the WW2 in Germany. This interpretation is not shared in many eastern country, expecually in russia where the russian Jelzin or industrial oligarchie is seen as a criminal periode, were the majority lost the income and slided into poverty, misery and crisis. It might be a future problem that the 89-events and its cause and implications of ideological fall down had not been really worked out by historian. However, the german power transisiton had been peacefull and the german SED party and their stict secrete service StaSi vanished without conflict. The wall was opend by a offical „failure“ decision of the DDR notice of Schabowski. Prof. Wang Hui quoted on Eduard Krenz the real background of the events „The SED still had principal control in the DDR, but different decisions had been made in Russia. “

Eduard Krenz Quote

This quoting is implicating that the russian decision on german politics had been wrong and the SED was month earlier determined to follow the Tian‘amen politics.

2 Also the russian retreat from Afghanistan. The graveyard of the empires, is quoted as a sovjet decline.

Notes on Chinese Modernisation
However the chinese tank politic did not happen in Berlin and times after the sovjet empire collapsed.
It is unfortunally not historical clear what was the detailed and complete Krenz discussion of the 89 -events, beginning with the Tian‘amen and ending with the Berlin wall.

Fall of the eastern Bloc

But for the chinese politic it was turning point and a change of paradigma.
One of the cause certainly was that eastern block people long time lived under constant systematic economical stress and structural misery. Actually the colapse was not about having personal freedom and democracy, as it was argued in the west.
It was Dengs Xia Peng who was opening the door for China and not repeating the economical mistakes of the sovjets, with some simple proposals.

However, the ways and means of develope communism is not explained by Marx and Engels. There are guidelines from Lenin and Stalin and their opponents Trotzki and others. The so called scientic Marxism was a scholar topic in eastern university based on the MEGA (Marx Engels Complete Editions). I personally never witness anyone who had a overview about the huge book works. So the understandable Lenin slogans like „Electricity is guiding the socialistic future „ have been put on the street banners in DDR and CSSR, Polska. Mao and other chinese intelectuals had lot of disputes with the sovjet guidelines, Finally the CPC yould launch a 5 year guide plan to migrate peasant worker for cheap production into the factories and have more economical progress as the west. It would not mean that the new openess is about all democratic rights for intensional free wills.

Fomer Dependences and 2000 Independences

Main thinking point was to keep the chinese independence which was gained since the britsh, german and japanese Invasion, the dominance of the Sovjet Union and the dominance of the american atomic hegomony in cold war periode. China had to deal with Korea and Vietnamese, Cambotchea conflicts. The basic idea was to keep the autonomy momentum for the CPC and improve the economical situation. Chinas politics should not have been interfered by any foreigner, which as agreed as a mainstream position and a CPC party line . Later on, Russian Putin would follow the same autonomy style, after he felt the strong rejections of american Obama politics treating Russia like any other country the USA could influence. So at the end with the beginning of the 2000 years, all the former East Block learned the lessons that it needs autonomy to remain in power. But this self efficency which always was a Mao baseline is based in the welfare and well being of the population even in a Adam Smith sense, where Money is universal value to mediate between the the people.
In fact, using capital as strategic mean to support a socialistic society, is not really in conflict with Marxist theory.
Prof. Wang Hui arguemted that the CPC offical had been worked for the years of cultural revolutions on the country side and would understand that needs of the migrants, making China a profitable industrial country.

200x Globalisation Turning Points

What was the lucky random for germany in 1989 and the profit of US hegemony, slowly became the win-win situation for chinese economy and Russia regaining military power in 200x.
With the military intervention in Syria Russia tried its come back on national politcs and the USA lost the support of Turkey.
In the 200x american and chinese companies certainly started to invest and influence the global trade. Modern Mass data mining, AI and modern commucation became the driving synergy.  
The US/EU tried to influence China as well, but because of the strong chinese autonomy politic, there was less mutual gain.

![Diagram of Globalisation Turning Points](image)

Trump was elected 2016 after american middle east politic turned into a mess and chinese economic and monitary politic was threating USA/EU industries.  
Trump, and the UK in a strange way, tried to imitate chinese autonomy politic with the „My country first“ and closed the border for Mexico and India migrants. In excluding others this way he could not really create a cheaper labour force for the US.
Germany Merkel, was thinking that migrants are useful, but did not recognize that most middle east migrants are not like skilled chinese peasants, but distributing only poverty and depending on national social services for longer time.
In a ironcal way Trump was also creating his own cultural revolution by setting on the values of his rural supporters from the tradtional conservative Country side and raising a conflict with the skilled academical workers and scientist.
China also had some critical minds on political and environmental progress, but could neutralize them in the same way Trump ignored the critical minds in the United States
But Human values, the status of freedom has a different tradtional value in China since Confucius time as in EU. The the general well being in harmony is more prevert as academical disputes.

---

3 Most of the big industrial drivers like Alibaba and Huawei are cooperating with CPC party line,
4 As chinese industrial bought the german robot factory KUKA it raised a public protest and distrust on China.
5 All american pragmatist could follow the community based reasoning, beter then european thinkers.

Notes on Chinese Modernisation
Chinas trade routes

China managed to organize world wide trade routes to south america, india, africa, the middle east and Europe. The harbours and seaports including Athen and Venice had been bought out by chinese enterprises.

Global Chinese Ship Routes

One of the major threats had been the pirates in the Malaga straits, the south china sea and Somalia. For these reason the OBOR land line silk routes have been expanded.

The ancient Peking -Istanbul route had been added many branches with access to the seas.

- China-Myammar  --indian ocean
- Myanmar-Bangladesh-Calcutta
- China-Pakistan      -Persian Golf
- China-Duisburg (Germany)

The way of building a roads are following strategies of the roman empire, but is also deeply routing in Tao\(^6\)-thinking.

Trading is the typical british, american and asian win-win concept .\(^7\)

---

\(^6\) Tao = way, is the most simply translation in order to create the Qi spirits of life and movements
\(^7\) The other combination win-loose or loose-loose are less in option, but part of colonization tales and history.
Ritual Education (Li) and political (Tiang) Stability and Harmonisation

The scholars and the teaching are playing an important role in all Chinese philosophies Bhudism, Confucianism, Taoism, Legalism and Maoism. What is interpreted as Li, almost a ritus of learning the true values for a well being in the society is a common line, which is connecting the ancient philosophy with the modern systems.

The Taoist Wu Wei (doing nothing) which was interpreted by the American hippies as a way to happiness and also quoted by HarvardX, does not have the same translation in Chinese language. This is because Chinese wording like Li, Ren, De, Tian are determined by HarvardX scholarship in a historical and analytic way, which must not reflect very simple daily life.

The principle of Wu wei is also a kind of requested passive attitude in a sense of not interference in the ruler guidance or what was named as Oblomov behaviour during Russian analysis. Self determination and self confidence in Europe is Asia, India is less requested, because intentional acts are mostly detected as a disturbance for community harmony. But for the typical idealistic German Hegel philosophy it would be a high goal to reach a state of high self consciousness.

In this sense the Taoist Wu Wei and also former Buddhist passive attitudes of not interfering became a major tool in Asian politics. The right way is the education of the masses in a ritual and not a sophisticated intellectual way. Preparing everything in a correct and acceptable manner will give the mandate of heaven (tian ming) and the authorisation to govern.

The educational system on Chinese, Indian, American and German schools do all have very different pedagogic. In the HarvardX discussion on TsinghuaX Chinese pupils complained about strong focus on memorization. In the American campus a kind of Socratic discourse is preferred, were pupils are discovering own ideas while discussing in a group.

The German scholars are requesting the students to find proofs and logics for their opinion. There is less Chinese Wu Wei in the Western education systems.

Global Wuhan Virus outbreak and and Tiang Ming

The Covid19 Virus was first found in Wuhan, produced by a zoonotic source. This kind of zoonotic diseases are increasing since many years because of environmental disturbances. While Zika and Ebola circled in a specific area, the virus in Wuhan could spread by air planes and mass transport globally. Wuhan is a very industrial and dense area. The CPC put all the efforts to lock down all communities in a systematic strict way, which was not possible in less organized and democratic countries. Health, education and food policy was always in the center of socialistic politics.

Control the Covid19 was a question of keeping the Tiang Ming in China, but in Trump opinion it was in the responsibility of the communities.

Comunism and Surveillance and big data

Surveillance and Supervision is one of the oldest Marxist instructions we know. Since the early days 1847 has Marx named Weitlings „Group of the Justice“ to Communist, the Marxist dispute with others like the anarchists Proudhon, Bakunin had been very harsh and engraved by distrust and

8 De- Virtue or Moral
9 Wu Wei is also interpreted as a flow or flux
10 Confucius was criticized much when he tried to link Li with music.
11 The naming of the Virus by the WHO has its own politics. The Ebola Virus is named after a African location, but the origin name Wuhan could not be used because it belonged to a Corona Virus Family.

Notes on Chinese Modernisation
supervision which might have been also a result of the critical minds of Feuerbach/Stirner Philosophs. Marx and more Engels was in conflict with german philosophy and tried to put Hegels philosophy up sie down, grounded on the feet, with the famous Feuerbach Thesis written on the stairways of Berlin Humboldt University HUB. Each polit comissar inside the KP was trained in supervision. So it should not be a surprise the Lenin, Stalin, Putin established rigour security services.

The StaSi was famous too, for his technics and wide spread IM (Informale Mitarbeiter) 12. But most of their works had been based on analog technics, like Mikrophones, Kamereas, Conversation and Type writer and written documents, because the DDR Robotron missed to deliver high bit Microprocessors. In the Klaus Georg Cybernetics Books and later discussion with his pupils from Uni Leipzig, I found no effidence that surveillance and supervision was a set value for his marxistic cybernetics. They told me that he was meber of the SED party, but also kept distance and later on his concepts have been rejected by Ulbricht/Honecker. Klaus was producing a lot of technical standard cybernetics books and dictionaries, which have been translated in many languages and brought to many academic librararies worldwide. This is why Karl Jaspers, Asby and other western cricits did not acknowledge his philosophical works and the fact that he developed the first cyber loop diagrams on society.

Supervision, Surveilance, educational programs, Proganda are normal standard tools of marxistic mass control since the early Weitling days. They have been adopted by nearly all communist rulers Lenin, Mao, Honnecker, Putin and rejected by their defectors and critics.

It is known that chinese supervision during the cultural revolution was very strict on every existencial level of ordinary people. In general it seems there is not a big contraction with the Li in the Shang and Zhou dynasties.

But as the huge SED paper based surveilance StaSi works is explaining the too costly inefficiency of the surveilance it becomes more clear that with digitalization and mass data and deep learn systems of chinese state and company technics, these marxistic technics do gain more control and efficiency. Most of the world HPC Supercomputer are still american and Chinese Tianhe-2 got on the top list.

It is also known that many Private Block Chain Computer with high energy consuming GPC Graphic processor cards, are powered by coal power plant.

The social credit program is a part of CPC politics and visual CCTV with face recognizion, mobile phone and other electronics are working more succient as SED paper works.

Modern Mass Data and cybernetic Marxism

The cybernetic socialism was a idea of DDR philosopher Georg Klaus and skipped in the Honecker time. It is not clear how this idea was introduced to China or developed in China, but all the 1970 cybernetic Klaus books must have been studied long time before.

The guiding Value in Klaus cybernetic is the control of consum behavior, which was working unsatifiying in the DDR. Klaus was focused on neural networks and could have implemented the facebook like push button as correction element.

Prof. Wang Hui pointed out the the CPC has made many experiments and corrective measurements in their long revolutionary phase.

It is known that most chinese industry are conform with CPC guidelines and support social stability within the chinese social credit system.

Alibaba and the Wechat App are supporting mass data tracking and surveillance algorithm which are accepted by the majority of the chinese people as a form to follow the Li.

---

12 IM Informal Worker fro StaSi

Notes on Chinese Modernisation
Interpreation on nature, the human body and enviroment

The chinese systematic interpretation on nature and the human body is quite different as in europe.

![Hegel System Diagram]

European and Asian thinking system

Logic as a general discipline is missing in chinese philosophy. (1) It does not mean all sentences and descriptions are not logic, but they are simple not structured as a Heraklit logos. The human body is related between the Tian and the sky. The european philosophy are not interpreting the body, its energy lines as Taoist Qi and Indian Chakras do. Sometimes, same as in religion, the heart is becoming a center of decision and not the brain. This entirely because of the reflection on community and common goals with others.

The natural Phenomen interpretation is in all philsoophy the oldest part related to Shamism, the indian myth time and older Chinese Shang Dynasties. Sterckx is interpreting that the Ying/Yang has its dark side past, which can be still found in older interpretation of the Traditional Chinese Medicine TCM . [1]The related habits to eat the body of rare animals to cure human disabilities is related with the first Covid19 Wuhan infection on the Wuhan wet market.

In the re-socratian philosophy the nature became the physical interpretation of the elements. Greek and Taoist do have both a system interpretation of the Flow/Flux or Wu Wei but with a different implication. In the Heraklit Logos the Flow is related to time logic . Both are oriented on river water flow. The difference was noted by Wittfogel (7) who noted the influence of hydraulic water control on asia, egypt and oriental societies with its great rivers and water irrigation issues. But with Heraklit the flow is the starting point of dialectical thinking (20), which is a general behavior of adaption in the chinese thought.
Loop Cycling Mode

Drawing cycling wheels and loops of life is an old technic since the Indian Vedas.

The similarity between Indian Chakras and Taoist Qi is that both are related to the human body. The western philosophy has another system which is including the nature, it work and movement in a CBS like loop. In both cases the waste of the human being are not included, but waste and shreds is what the anthropology is discovering.
The action model of evolution was sketched from Friedrich Engels, to explain the importance of work and consumption and how it was necessary that human need tools and machines to survive and become proletarians. I think that Engels was wrong excluding the vegetarians. Cutting trees and treating soil with fertilizer has a similar killing and destroying effect as hunting and killing animals.

The modern Cyber Physical System CBS from the Cybernetic Ashby/Klaus still is the same as designed industry 4.0. It is a machine model and not a human model as the Indian/tao cycles. The only difference is that the digitalization has shaped a computational model or digital twin of the real worlds, to calculate the compensations by AI. The former model was controlled by analog computers and even more fast in time compensation.

Emission, Waste, destruction, deformation are still not considered much as second output variable with the desired product of the machine.

Making the machine work another variable is energy from O&G or RES. This might have a better implementation in the Industry 5.0 concept after Covid19 and climate change.

All lecturer about China are telling that the CPC has implemented corrective measurements to improve the environmental standards in big megacities like in the Polluted Wuhan.

Environmental Protest in China

But again the CPC would not recognize foreign CNN/BBC interference critic. Most environmental protest in Asia are about huge air pollution and breathing. Wearing mask is normal long term in most of the Asian and Indian cities.
This is kind of irony because the taoist concept of Qi and the indian Yoga is about the correct breathing technic.

The Qi breath is circulating the human body flows. The Covid19 lung disease is a RNA virus who can stop breathing.
I am not convinced with breathing exercises and better follow the Indian Charvaka and hedonist Epikureien who said it is about consuming, eating and drinking and enjoy life.
German and Chinese historian about the central Asia threats

Germany has a long historical research on oriental philosophies, the Arabic, Middle East and Indian and also Chinese research in archeology and also Religion and Philosophy, but has little research on German and Celtic archeology and also DDR history. The great works of the 8 Spengler cultures will come more obvious by the museal exhibition in London, Paris and Berlin. One common European, Slavic, Indian and Chinese enemies are the mongol hords of Attila, Tschingis Chan, Turks u.a. terrifying whole Eurasia in the roman time. The main difference is that Europe could stop the mongol invasion, while China and India was long time occupied and ruled by central Asian mongul, moghul and Turk groups. These foreign rulers also influenced in their social, government and architectural systems.

The very Chinese contribution is of course the great wall, the strict will for impendence and its many protection systems against Central Asian invasions.

While the most strict and sucessful German wall has fallen 1989, Trumps conservatives are collecting money to build a new high tech Mexican wall.

Carving bones and cooking the hearts and winning a war

While the main stream of American analyzer is focused on the Confucius concept of Li and Ren, the Bone carving and its technics are one of the most ancient habits. Carving is one of the oldest tradition in forming relics and keeping long memories. Stone inscriptions are public exposed to the elements and may decay in time, while bone are more conserved in the buried caves, not public be safe to be restored.

Writing Chinese signs on the dead bones has some special metaphysical meaning. Carving and wood carving had a long tradition in creating toy figures and puppets for various religious and social reasons. This all changed with Petrol industry and the Plastic Injection Molding Machines having a great usage in all kind of Barbie Puppet, Plastic Toys, PET Bottles, Chasis for electronics, Toys and tools sold and dumped around the world.

Still the single form is created in a design process, but it cannot really compared with wood and bone and fish bone and ivory carving.

Bone barving is the way to form peace of former living nature. Sterckx reflected on how carving is the way to shape a society, using a sharp knife and dropping bone, ivory tooth wood chops.

Chinese CPC may often use this wording carving for experimental actions during the extreme of culture revolusions.

Another picture introduced by Sterckx and other lecturer is the Chinese style of cooking. Cooking is not a big tradition in the war loaded German history, because it is mostly a method to feed manual work force.

13 Spengler predicted that a high civilized culture comes to decline with a primitive one
14 Germany has tradition of walls, such as the roman Limes, which was also designed to control the trades.
15 The oldest one is the german venus.
17 Most expensive Chinese items in the antike shops are ivory and fishbone carvings. More then metals and stones
18 Friedrich Engels pointed out the eat meat is related to human evolution

Notes on Chinese Modernisation
Eating, especially in south china, is embedded in chinese culture and philosophy sing Shang time. Typically chinese is the big round turning table, filled with plenty of small plates with a large variety of rare animals and plants, which would not be touched and rejected by the idian Janist. Ludwig Feuerbach has implemented the german ontological saying „You are what you it!“.

Actually eating is a form of swallowing and digest nature, which had larger cultural tradition in the european middle ages and southern europe. It is the process of killing, digest and birthing in a 24/7 cycle.

Chinese, greek and german war philosophy do have common interpretation of forming, carving something new in society. This partly dark destructions habits are implemented since the old Shang Philosophy, in the Heraklit Logos and in the following Hegel slave master dialectic. The paradox logos about this is that destruction and nihilation of something is opening the path for the new, but not the original female birth.

The Hegel pupil Clausewitz and the ancient Tsu Zu [5] are sharing theory to make war a way to shape society with strategy of surveilance, spying, creating surprise and killing.

So there is a common cultural technic link in carving, cooking and working & fighting as already sketched by Friedrich Engels.

---

19 My first chinese lecturer in TUB Berlin told me that everything moving could become a target to eat in South China.

20 Du bist was du ißt. Ist = sein, be form  ißt = eating
MOOC Courses ()

Philosophical lessons
• (1) Humanity and Nature in Chinese Thought,
  Prof. Chad Hansen, Hongkong Uni, Edx, finished 5.2020
• (2) New Horizon in Chinese Philosophy
  Prof. Yuncheng Zhou, TsinghuaX Uni
• (3) Tao to Happiness
  Prof. Puét, Havard, EDX
• (4) Indian Philosophy
  Prof. Satya Sundar Sethy,

Wuhan air pollution

Chinese Food

https://www.chinahighlights.com/travelguide/chinese-food/regional-cuisines.htm

Chinese taste habits

- Northern China food — salty, simple, less vegetables with wheat as the staple food
- Western China food — hearty moslemic halal food with lamb the main meat
- Central China food — spicy with a lot of seasonings
- Eastern China food — sweet and light
- Southern minority food — sour
Literature []

1. Roel Sterckx, Chinese Thouft from Confucius to Cook Ding, 2019
2. Wolfgang Bauer, Geschichte der Chinesichen Philosophie
3. Klaus Mehnert, China nach dem Sturm
4. Mengzi, Von der Freiheit des Menschen
5. Sun Tzu, The art of War
6. Laotse, Lin Yutang
7. Wittfogel, Die orentalische Despotie
8. The Tao of Seduction, Lin Liao Yi
9. Mantak Chia, Healing love through Tao

Chinese Philosophers

Thomas Prüfling, 2020, Zorneding
